Labor Shed Analysis

A labor shed analysis is defined as where workers work and where workers live relative to a user-defined selection area. This analysis helps to determine where a labor market draws its commuting workers. Labor shed studies can draw comparisons between various geographies including state, Congressional District, Metropolitan Statistical Area (MSA), county, Workforce Investment Area (WIA), Zip Code, and Census tract. By indicating how many of the selection area workers work outside the area, labor sheds can help identify potential pools of workers who would be available for work in the user-defined area.

Labor shed studies provide economic developers and existing or prospective employers a tool to understand the local labor market and make informed expansion and site selection decisions.

OnTheMap, Census Bureau

OnTheMap is a mapping and reporting tool developed by the U.S. Census Bureau showing employment and home locations of workers with companion reports for user-defined areas. It is the first synthetic data product released by the Census Bureau. OnTheMap is an important tool for Florida to perform labor inflow/outflow analyses and provide commuting data to planning and economic development agencies as well as Regional Workforce Boards. OnTheMap data is also used by the Department of Economic Opportunity to help quantify natural disaster impacts for emergency management agencies based on where workers live and where they work.

OnTheMap integrates existing data from state-supplied administrative records on workers and employers with existing federal censuses, surveys, and other administrative records. The state Labor Market Information (LMI) agencies supply key data from unemployment wage records and from businesses each quarter. The Census Bureau merges the state-supplied data with current demographic information to produce the data found in OnTheMap. By combining data from different administrative sources, censuses, and surveys, the Census Bureau produces local employment information that was not previously available.

Florida Department of Economic Opportunity, Bureau of Labor Market Statistics (LMS)

The Florida Department of Economic Opportunity's Bureau of Labor Market Statistics produces, analyzes, and distributes labor statistics to improve economic decision making. These data are produced as part of the federal/state cooperative statistical program with the U.S. Department of Labor, Bureau of Labor Statistics, and the Employment and Training Administration.

Executive Summary

The analysis of workforce and demographic characteristics, including commuting patterns of Citrus County was conducted at the request of CareerSource Citrus Levy Marion. This report includes population, labor force, and demographics for Citrus County.

A detailed examination of commuting patterns for Citrus County shows that the county has a net outflow of 1,953 workers. Using the latest annual Census data available, there were 31,565 workers employed in Citrus County and 33,518 workers living in the county. Of the workers who lived in the county, there were 15,062 workers who were employed outside the county (44.9 percent of the total).

With 44.9 percent of workers who reside in Citrus County employed outside the county, outflow is well below the highest rate seen in some of the rural counties in Florida such as Dixie County with 86.4 percent outflow and Gilchrist County with 85.7 percent worker outflow.

Of the 15,062 Citrus County workers who are employed outside the county, the top destination counties are Marion (3,345 workers), Hernando (1,741 workers), Orange (1,580 workers), Hillsborough (1,453 workers), and Lake (1,163 workers).

The commute for Citrus County workers is a relatively long one with 38.4 percent of home to work commutes being less than 10 miles and 61.6 percent longer than 10 miles. Commutes of 10 to 24 miles are done by 26.9 percent of workers, commutes of 25 to 50 miles by 15.4 percent of workers, and commutes of over 50 miles by 19.3 percent of workers.

Commutes into Citrus County of less than 10 miles are done by 40.3 percent of outside workers, while commutes of 10 to 24 miles are done by 25.2 percent of workers, commutes of 25 to 50 miles by 11.5 percent of workers, and commutes greater than 50 miles by 23.0 percent of workers.
